

1. <http://github.com/bingran1>
2. 2.25.1
3. 2.26.0
4. One with the environment is 2.26.0, the other one without environment is 2.25.1
5. The status code is returned for <http://google.com> is 301 Move Permanently. The URL with “www.”, as <http://www.google.com> return 200 status code.
6. For <http://google.com/teapot>, using curl -i returns 301 Move Permanently, using curl -iL returns 301 Move Permanently and 418. For <http://www.google.com/teapot>, using curl -i and curl -iL both return 418 I’m a teapot.
7. When used -X POST, the part “form fields” which under “Form Contents” has more informations or lines than the one use curl -i. This method is used for making a POST request.
